Aerodynamics, from Greek ἀήρ aer (air) + δυναμική (dynamics), is the study of motion of air, particularly as interaction with a solid object, such as an airplane wing. It is a sub-field of fluid dynamics and gas dynamics, and many aspects of aerodynamics theory are common to these fields. The term aerodynamics is often used synonymously with gas dynamics, the difference being that ...

In geotechnical engineering, drilling fluid, also called drilling mud, is used to aid the drilling of boreholes into the earth. Often used while drilling oil and natural gas wells and on exploration drilling rigs, drilling fluids are also used for much simpler boreholes, such as water wells. One of the functions of drilling mud is to carry cuttings out of the hole.

An early step in heat exchanger design is finding the heat transfer surface area needed for a specified heat transfer rate, estimated overall heat transfer coefficient, and calculated log mean temperature difference. The needed heat transfer surface area is calculated from the basic heat exchanger design equation: $Q = U A (\log \text{ mean temperature difference})$.
