Lexical density is a concept in computational linguistics that measures the structure and complexity of human communication in a language. Lexical density estimates the linguistic complexity in a written or spoken composition from the functional words (grammatical units) and content words (lexical units, lexemes). One method to calculate the lexical density is to compute the ratio of lexical ...

Lexical density - Wikipedia

Language acquisition is the process by which humans acquire the capacity to perceive and comprehend language (in other words, gain the ability to be aware of language and to understand it), as well as to produce and use words and sentences to communicate.. Language acquisition involves structures, rules and representation. The capacity to successfully use language requires one to acquire a ...

Language acquisition - Wikipedia

The present study used a sentence-picture matching experiment with 4 types of target sentence conditions, contrasting in event probability and noun animacy, to explicitly investigate how deaf individuals with early language deprivation interpret simple, subject-verb-object (SVO) sentences in American Sign Language (ASL).
