Optics is the branch of physics that studies the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave, other forms of electromagnetic radiation such as X-rays, microwaves, and radio waves ...

Geometrical optics, or ray optics, describes light propagation in terms of rays. The ray in geometric optics is an abstraction useful for approximating the paths along which light propagates under certain circumstances.. The simplifying assumptions of geometrical optics include that light rays: propagate in straight-line paths as they travel in a homogeneous medium

LOOK4 Optics App for iPad. Based on XML catalogues LOOK4 Company developed a App for iPad to be used in the optician shop. The new app provide the optician a bundle of advantages: "smart presentation, detailed information and advice of the customers, easy and quick order of frames, sunglasses, spare parts and merchandise directly from the app.

The Romans must have been particularly pleased with themselves the day they invented lead pipes around 2000 years ago. At last, they had an easy way to carry their water from one place to another. Imagine what they'd make of modern fiber-optic cables—"pipes" that can carry telephone calls and emails right around the world in a seventh of a second!

Angular Resolution Criteria. This diffraction artifact — the Airy disk and encircling rings — is the smallest possible physical image of a "point" light source. As a result, the diffraction artifacts created by two "incoherent" or physically unrelated light sources (such as two stars) will appear to merge on the image plane when the angular separation between them is smaller than the ...

Fotonen (Oudgrieks: φῶς, phōs, licht) zijn elementaire deeltjes uit het standaardmodel van de deeltjesfysica. Ze hebben geen rustmassa en bewegen zich in vacuüm met de lichtsnelheid voort. Licht en alle andere elektromagnetische straling bestaat uit fotonen. Het foton is het ijkboson dat de elektromagnetische kracht draagt.. Afhankelijk van de gebruikte meetopstelling heeft straling, in ...

Antireflectiecoating of AR-coating is een standaardtype optisch filter in de vorm van een coating die wordt aangebracht op optische componenten, (zoals lenzen, brillenglazen, objectieven, etc.) om reflectie tegen te gaan. Deze coating verbetert het rendement van de componenten, doordat hinderlijke reflecties worden verminderd. In complexe systemen, zoals telescopen, verbetert de ...
